Software Development Lifecycle: Agile, Scrum, Rapid Application Development

Project

Project Management System for Information Technology Department

Jul 2022 – Aug 2022

PT Taspen (Persero) – Jakarta, Indonesia

As a full-stack developer, I developed a web-based Project Management System to manage project requests received by the Information Technology Division of PT Taspen (Persero) from other divisions and from the division itself. The application can store new project data, add documents, and project workflows that are organized according to the role and position of the active project. The development of this project is built with Laravel on a local database and the implementation will be integrated by staff for the company's internal database.

Inventory System

Feb 2022 – May 2022

Askha Jaya Store – Bandar Lampung, Indonesia

As a backend developer, I built an application with the CodeIgniter 3 framework with PHP and CSS programming. This application can manage incoming and outgoing goods data, availability of goods, sold goods, user accounts, and sales reports from Askha Jaya Store.
